

Software Solutions: Year in Review

Another great year has come to a close and we want to say thank you to our users! Through 2017, we delivered even more functionality to our software to ensure your business is more productive, more profitable and more sustainable.

This year we are proud to have delivered a new feature release to our software suite every 8.5 working days!

Here is a recap of the functionality that we added in 2017 to enhance your user experience:

Zedi Access and Zedi Composition Management:

- Recalculate and correct historical gas volumes and easily backdate flow parameter changes on SCADA devices
- New filter to quickly organize the Zedi Access hierarchy
- Create a sampling schedule to improve sampling frequency and increase your hydrocarbon program compliance
- Manage by exception with automatic approval of your analysis
- Zedi can now assist and supervise the operating and accuracy of your hydrocarbon program through our managed service

Zedi Go (mobile app):

- Easily access current production and operational data, update settings, and control your field devices right from the field

We have surpassed over 4,600 downloads of Zedi Go.

Roughneck:

- Utilizing analytics to identify Key Performance Indicators for your company
- Quick and easy drop and drag file uploads
- Group all or any modules together for fluid work flow

Zedi Vital:

- Enter and monitor tank levels, while inputting daily estimates
- Utilize more units of measure to match your company's requirements
- Creation of new variance reports
